DRIVEN BY INNOVATION, GARANT® MAKES THE PROMISE TO CREATE THE BEST TOOLS FOR YOU.

For more than a century, Garant® has been combining know-how and creativity to design and develop tools with that same inventive spirit its founders had. Garant® is far more than just a manufacturer of accessories and non-powered tools—it is a large family sharing the same values, the same DNA. Stubborn people committed to give it all to constantly improve and reinvent its products. We believe that innovation is nothing if it doesn't consider those for whom it was intended. That's why Garant® has implemented a rigorous research and development process to ensure that users always come first, whether they are professional workers, do-it-yourselfers or just gardening lovers. Tools are at their service—they are the extension of their know-how. Whatever the task, we are convinced there is a way to improve it in terms of ergonomics or speed of execution by using traditional or new materials and tools in tune with today's realities. Garant® keeps attuned to its consumers' needs and to every aspect of the job; the tools that we create are carefully thought-out down to the very last detail. The most demanding workers recognize in our tools a durability that keeps up with them and all of them find smart features making their job easier.

BUT WHY SHOULD YOU TRUST GARANT®?

Garant® is a dynamic, simple, flexible, reliable, forward-looking Canadian company. You can find everything at one place, whether you're thinking lawn care, gardening, or construction, industrial or farm tools. In short, a wide selection of tools meeting all the needs of Canadians. We operate with the firm conviction that we team up with you and that ultimately, together we offer quality products and ensure user satisfaction.

For more information, visit our website at www.garant.com or don't hesitate to call our customer service at 418-259-7711 or 1-800-463-7040.

* Weight in ounces.

UNDETACHABLE HEAD AND HANDLE

- Safety lock fitting
- Keeps head firmly fixed to handle
- When assembled, the handle resin molds to the head and creates a uniform structure

STEEL OVERSTRIKE PROTECTION

- Neck forged to head for increased handle impact protection
- Avoid broken handles!

Patent pending

REPLACEMENT PARTS

REPLACEMENT HANDLES

All Garant® products are manufactured from premium quality materials for ruggedness, durability and superior performance.

How to replace a shovel handle?

Materials:

- 1 replacement handle
- 2 rivets

Tools required:

- Hammer
- File (or grindstone)
- Punch
- Vise (or similar tool)
- Electric drill

- 1 - Hold the old shovel with a vise or a similar tool in order to file the rivet's head; a grindstone can also be used.
- 2- Using a punch and a hammer, hit the old rivet until it pops out from underneath.
- 3- Take out the old handle from the blade.
- 4- Take out the cap at the end of the replacement handle and locate the rivets that will be used to assemble the new handle.
- 5- Insert the new handle into the blade's socket. With the blade up and the handle down, push down on the blade until it reaches the shoulder of the handle or until it holds firm. Make sure that the grip is in line with the blade.
- 6- With an electric drill, bore a hole through the handle.
- 7- Drive the rivet through the socket and the handle with a hammer.
- 8- Hammer the rivet's head until it is flat, so that it holds firmly in place.
- 9- File the excess from the rivet to prevent injuries.

Your shovel is now as good as new!

THE SUPERIOR QUALITY OF OUR FIBERGLASS

Our fiberglass handles are made from long strands of fiber that are compressed and bound in resin, then encapsulated in a high-density polypropylene jacket, that makes the handle 100% waterproof. In addition, the bright colored handle is highly visible and the overmolded TPR (Thermo Plastic Rubber) non-slip safety grip provides added safety.

TIPS FOR REPLACING A FIBERGLASS HANDLE

Along with a replacement handle and epoxy, you will need the following:

- A vice (or similar opening)
- A cardboard drinking glass (or similar disposable recipient)
- A disposable stick

Steps:

1. After sawing off the old handle as close to the head as possible, make the eye of the head perfectly clean by using a steel brush or sandpaper. Remove any dirt or dust.
2. Install the gasket provided with the epoxy kit and position the latest vertically in a vice (or any other holder) for 24 hours in a normal-temperature room.
3. Insert head on fiberglass handle while making sure to line up the head with the gasket.
4. Mix epoxy by following instructions attentively and take precautions:
 - 4.1 To mix up, use a cardboard drinking glass or another disposable recipient—avoid styrofoam and plastic;
 - 4.2 Pour the entire content of the two bottles into the disposable recipient;
 - 4.3 Use a disposable stick to mix both parts of epoxy. Stir epoxy for two minutes until the color is uniform—this step is very important, as epoxy will not harden if not mixed correctly;
 - 4.4 Once epoxy has a well-mixed consistency, pour or drip it into the top of the head around the handle and allow 24 hours for the epoxy to harden—note that one should wait one week before using the tool;
 - 4.5 Dispose correctly of waste bottles, mixing stick and recipient.

GRADES OF WOOD

We only use U.S. hickory in our handles. Its long fibers and exceptional shock absorption properties make it particularly well-suited for striking tools.

TIPS FOR REPLACING A WOODEN HANDLE

Along with a replacement handle, a wooden wedge and a steel wedge, you will need the following:

- A saw
- A hammer or mallet
- A flat-end punch or small dowel
- A rasp or sandpaper
- A vice (or similar opening)

Steps:

1. After sawing off the old handle as close to the head as possible, place the head across the jaws of the vice (or similar opening). Using the punch or dowel, remove the remainder of the old handle.
2. Use the saw to trim the end of the new handle over a length of about 1 3/4 in. (4.45 cm) to the approximate dimensions of the head socket.
3. Use the rasp or sandpaper to fashion the handle to easily fit into the head socket. Don't remove too much wood as the handle needs to fit as tightly as possible. Push the handle into the socket to about 1/2 an inch (1.27 cm) of the bulge.
4. Place the end of the handle on a strong and stable surface. Insert the wooden wedge (block) into the groove as far and as tightly as possible. Make sure you don't split the tool head. Saw off the end of the wedge remaining above the head of the axe or mallet.
5. Place the steel wedge crosswise on the wood wedge and hit it in with a hammer.

Here you are with an almost brand new tool!

WARRANTY COVERAGE

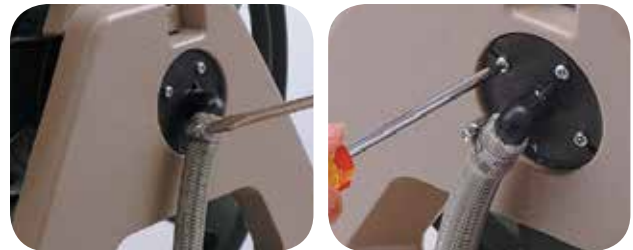

Garant® Company warrants to the original purchaser only of the accompanying product that such product will be free from defects in material or workmanship for a limited warranty period. The warranty period begins on the date of purchase and extends from 90 days to lifetime as specified. This warranty is offered to the original purchaser only and is not transferable.

In the event of a defect in material or workmanship during the warranty period, Garant® will provide a replacement product at no charge to the original purchaser, provided that the product is returned to its original place of purchase and is accompanied by proof of purchase. Damage to the product due to any cause other than a defect in material or workmanship—including, but

not limited to, accident, misuse, abuse or incorrect use, normal wear, unauthorized repair or alteration, and non-personal use—is excluded from this warranty.

This is the only warranty recognized by Garant®. All other warranties, whether legal, expressed or implied, are void. Garant® is not liable for damage of any kind resulting from the use of its products. Garant's responsibility is limited solely to product replacement in accordance with the above terms.

The application of this warranty may vary from province to province in conformity with provincial law.

IMPORTANT NOTICE

Tighten assembly using a screwdriver before use.

Assembling of molded parts after the injection process and/or vibrations during transportation may have caused the assembly to loosen and leak if not tightened properly.
