

Zebra Instruments Presents - *The*

*Short-Pro Tool*TM

Find 24 Volt System Shorts Without a Pocketful of Fuses!

Automatic Reset Circuitry Finds Shorts Without Risking Circuit Damage

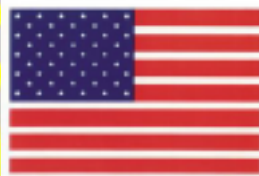

- **Saves Time -**
The Short-Pro Tool helps you find 24V System shorts by acting as an auto-resetting circuit breaker. You can attach its alligator clips directly to the two ends of a fuseholder.
- **Resets Automatically -**
The Short-Pro Tool's red LED lights brightly when it trips; telling you a short exists on that branch. When the short (or a lead) is removed, the Short-Pro Tool automatically resets.
- **Saves Equipment -**
Many Techs are tempted to use something other than the proper rated fuse when their last fuse 'blows'. This often burns the circuit board copper or the transformer.
- **Convenient -**
Small and light enough (<1 oz) to fit in your shirt pocket or tool box, the Short-Pro Tool can also save you steps back to the truck; or the parts store for more fuses.
